

AniClean R5/L

PROPERTIES

Highly alkaline, water-miscible cleaner concentrate for use in spray cleaner.

- Two-phase or single-phase in concentrated form, highly alkaline, amine-free concentrate.
- Designed for removing highly cross-linked printing inks from press rollers and screen rollers.
- Suitable for removing water-based printing inks.
- Well suited for cleaning in closed spray methods.
- Product concentration in water should have 30-50%.
- Suitable for steel, stainless steel, ceramic, HDPE and Teflon surfaces.
- The working solution should be used in the temperature range of 45 °C - 80 °C.

Characteristic	
Appearance	clear/yellowish liquid
Density	approx. 1,102g/l
pH	13-14
Boiling point	undefined
Flash point	approx. 87°C
Packaging	canister 22kg

APPLICATION

AniClean R5/L is a highly alkaline, amine-free cleaner concentrate used to produce aqueous cleaning baths for closed cleaning methods using spray applications. Designed for removing highly cross-linked and also water-based printing inks from press rollers and screen rollers. In the application concentration, the cleaning bath is foam-free at temperatures above 40 °C.

PROCESS & NOTES

The optimal cleaning temperature and cleaning bath concentration depend on the degree of difficulty of the cleaning task. This can be determined individually. Maintenance of the cleaning bath is recommended in order to conserve the cleaning effect of the used cleaning bath as long as possible. To compensate cleaning bath evaporation and entrainment, periodic or continuous topping up of the used cleaning bath with a mixture is recommended. As this is a 2-phase product, please stir the mixture well in the feed tank and during pumping into the machine! Cleaned surfaces are to be rinsed with water. In the case of standard steel, additional treatment with a temporary anti-corrosion product (e.g. InCorr 2238) is recommended to avoid rust formation. Product is not suitable for aluminium, zinc, non-ferrous metals and plastics. Protect against frost during storage. Before use, please observe the instructions on personal protection equipment in the safety data sheet.

When using highly effective cleaning agents for industrial applications, special precautions must be taken, and health and safety regulations must be followed. The required personal protective equipment should be used during application, and after completion, hands and work materials should be thoroughly washed. The product should only be stored in its original packaging, which must be disposed of according to the instructions on the safety data sheet after it is emptied. Familiarize yourself with the hazards and safety rules on the label and the safety data sheet, which is available upon request.
