

CeraClean® Fox

PRODUCT DESCRIPTION

Product is a ready to use special cleaner for intense cleaning of anilox rolls. It is able to remove even dried up inks and it cleans the roll deep into the cells. **CeraClean® Fox** is water-based and free of halogenated solvents. In the basic form biodegradable and PH neutral. Product can be used for water-based, solvent based and UV-based flexo printing inks.

TECHNICAL DATA

Appearance	straw-colored liquid
Relative density in 20°C, g/cm3	1,06 ± 0,03
pH	not specified
Biodegradability	90% after 28 days - easily degradable
Flash point	> 90°C
Autoignition temperature	>240°C
Package	bottle 1l

APPLICATION

CeraClean® Fox was developed specially for deep cleaning of the cells from anilox rolls.

INTENDED USE

With a special cleaning rag, **CeraClean® Fox** can be applied undiluted on the surface of the anilox roll. Let the cleaner take effect for a few minutes. The ink can be removed without problems by rotating movements with the cleaning rag. Afterwards the anilox roll should be washed with water and dried with a rag.

When using highly effective cleaning agents for industrial applications, special precautions must be taken, and health and safety regulations must be followed. The required personal protective equipment should be used during application, and after completion, hands and work materials should be thoroughly washed. The product should only be stored in its original packaging, which must be disposed of according to the instructions on the safety data sheet after it is emptied. Familiarize yourself with the hazards and safety rules on the label and the safety data sheet, which is available upon request.
